PREFACE

The standards for drafting contained herein are issued for the purpose of maintaining uniformity and clarity in the preparation of Department project drawings.

The manual is intended to be used by the various Divisions within the Department and by consultants doing work with or for the Department. This manual is not a text book on drafting practices or a substitute for drafting knowledge, but is an aid to create uniform and easy to read Department drawings. Drawings may be drafted manually or with a CADD system. The standards will be applicable to both types of drawings unless specifically noted otherwise. If the plans are prepared with freehand lettering, all lettering on the title sheets, street names, title blocks, section titles and other prominent lettering shall be done using Leroy lettering with an equivalent size to the size shown on the sample plans.

The manual is arranged in sections. The first section contains the general drafting procedures. The later sections supplement the general information with specific information pertaining to individual types of drawings, details or projects.

SECTION A
GENERAL DRAFTING INFORMATION

A-1 INTRODUCTION

This section contains general drafting guidelines for various aspects of a project. The information in later sections supplements these guidelines. Any conflicting information in later sections has precedence over information in this section. Any deviation from, or addition to, these standards should be adequately shown on the plan so that construction details are not overlooked and/or misinterpreted.

A-2 DRAFTING MATERIALS

Use 3 mil polyester drafting film for all manually drafted projects. Use ink and pens acceptable for use on polyester drafting film. Contact the Technical Services Unit, Design Division, regarding allowable substitutes or alternatives.

Reproduce final CADD drawings onto photographic polyester drafting film after drawings are ready for signature. All stamps and signatures will be placed on the photographic copy of the drawings.

A-3 PREPRINTED AND ELECTRONIC SHEETS

Los Angeles County Department of Public Works standard title, plan, plan/profile, and section sheets for various types of projects are available in electronic format and on preprinted polyester drafting film. These sheets are 841 x 594 mm in size. A list of these sheets and their available formats is shown in **Appendix A, Table A3-1**.

A-4 NUMBERING

When displaying numbers, always use decimals, never fractions. Use a leading zero before the decimal marker for values less than one. Use spaces instead of commas to separate blocks of three digits, both before and after the decimal marker, except for currency. In numbers with only four digits on either side of the decimal, a space is not necessary except for uniformity in tables. The decimal marker is a period. Place a space between the number and the unit of measure, when shown.

[When not using SI units, use commas to separate blocks of three digits before the decimal marker. Numbers after the period are not separated. Do not place a space between the number and the unit of measure symbol.]

A-5 LETTERING

Letter all text in Leroy font or equivalent, such as Universal or Helvetica. Lettering for

all titles, subtitles, street names and match line text will be upper case. It is preferable not to use abbreviations. However, when room for lettering is limited, abbreviations may be used. Periods are not to be used with abbreviations. Abbreviations will be capitalized and spelled as shown in **Appendix A, Table A5-1**. Do not mix names and abbreviations in units of measure. All other lettering will follow normal grammatical rules: the first letter of the first word in a sentence is upper case and the rest of the statement lower case. The plural form of metric units is the same as the singular form. Lettering in plan view will not have a slant, but lettering in profile view will have a 15o slant to the right so that the letters will stand out against the profile grid.

Place lettering to avoid crossing leader lines. When necessary, leader lines will be broken to accommodate lettering. Draft text with height and line weight as shown in **Appendix A, Table A5-2**. Minimum text height will be 2.5 mm (.100") for both freehand and mechanical lettering. This minimum will ensure the readability of the plans when they are reduced for micro fiche or other long term storage. Sample text showing the direction of lettering is shown in **Figure A5-1**.

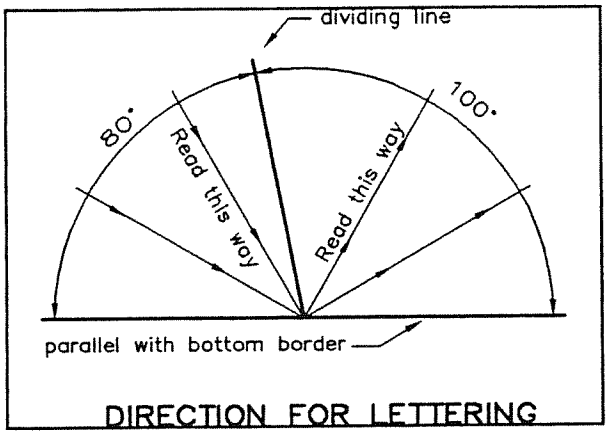

Figure A5-1

A-6 LINE FONTING AND THICKNESS

All lines should be clear, sharp, and distinct. Lines are shown with different thicknesses and fonting so the entities that they symbolize are recognizable quickly and distinctly. Draft line work with thickness and fonting as shown in **Appendix A, Table A6-1**.

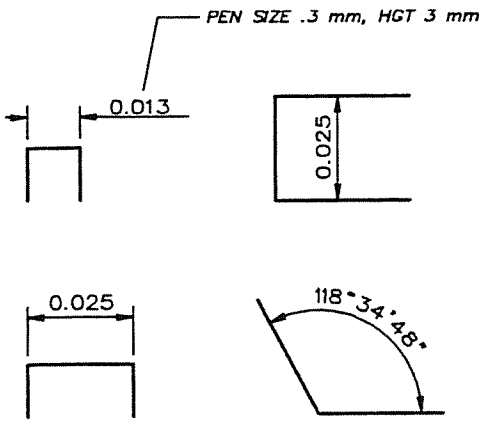
A-7 PATTERN HATCHING AND THICKNESS

Areas are filled with a pattern to distinguish them from other areas. Draft hatching with thickness and pattern as shown in **Appendix A, Table A7-1**.

A-8 DIMENSIONING

All dimension text will be in meters. A leading zero and 3 decimal places is required for dimensions less than 1 meter.

[When not using SI units, the format of dimension text will be governed by the type of drawing scale used. Feet and inches (16'-6") are to be used with architectural scales and decimal feet (16.50') are to be used with engineering scales. A leading zero is required for dimensions less than 1 foot when using the engineering scale. Dimensions 2 feet and less shall be shown as inches when using the architectural scale.]



DIMENSIONS

Figure A8-1

The dimension line will be solid with arrows on both ends. The arrow style will be a filled triangle. Its size will be 4 mm (0.15") long with a length to width ratio of 3. Place dimension text parallel to and centered above the dimension line. When extension lines are used, leave a 1 mm (0.05") gap between extension lines and entity being dimensioned. Do not place a dimension line between extension lines when text and arrows are placed outside of extension lines due to space requirements for dimension text. When text is placed outside of extension lines, it should be centered above and parallel to the arrow leader. Dimensioning examples are shown in **Figure A8-1**.

A-9 LABELS AND CALLOUTS

Labels will read parallel with the bottom border of the sheet. The tail will be centered at the beginning of the text string when the label is to the right of the object, and at the end of the text string when the label is to the left of the object. This applies to both single and multi-line text strings.

Callouts will be perpendicular to the alignment centerline,and placed outside of the property lines. Examples of labels and callouts are shown in **Figure A9-1.**

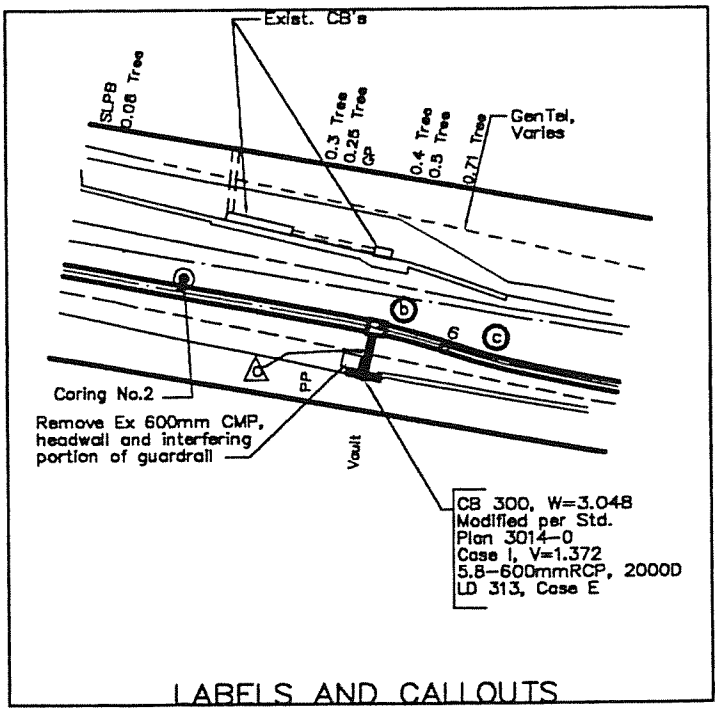


Figure A9-1

A-10 SCALES

Draw plan/profile sheets to a horizontal scale of 1:500 (1"=40') and a vertical scale of 1:50 (1"=4'). It is acceptable to use a vertical scale of 1:100 (1"=8') when steep grades would otherwise require more than one break line per sheet. Use the same

vertical scale throughout the length of the project. Clearly note on the profile the use of a vertical scale other than 1:50 (1"=4').

Draw plan sheets to a horizontal scale of 1:500 (1"=40'). Plan sheets may also be drawn to a scale of 1:1000 (1"=80'), 1:200 (1"=20') or 1:120 (1"=10') when more or less detail is required.

Draw details to a scale of 1:100 (1/8"=1'-0"), 1:50 (1/4"=1'-0"), 1:20 (1/2"=1'0") or 1:10 (1"=1'-0"). Details will be of such scale that all pertinent data and controlling dimensions can be shown legibly. Details should be proportional when not drawn to scale.

[Architectural scales should be used for structural details. 1/4"=1'-0", 3/8"=1'-0", 1/2"=1'-0", 3/4"=1'-0", 1"=1'-0", 1 1/2"=1'-0" or 3"=1'-0" are the preferred scales to use.]

Provide a graphic scale beneath the North arrow on all plan and plan/profile sheets. Graphic scale examples are shown in **Appendix A, Table A10-1**

A-11 SLOPES

Show slope data on all storm drain and sewer structure profiles in decimal format with 5 decimal places. Show slope data on all highway profiles in percent format with 3 decimal places. Show slope data on all cross sections except cut and fill slopes in decimal format with 3 decimal places.

Show cut and fill slopes as a ratio of vertical to horizontal. For slopes less than 45°, the vertical component shall be 1. For slopes over 45°, the horizontal component shall be 1. To eliminate confusion, a V should be used after the vertical leg and an H after the horizontal leg. Show all slope text parallel to the structure being annotated. Examples of displaying slopes are shown in **Figure A11-1**.

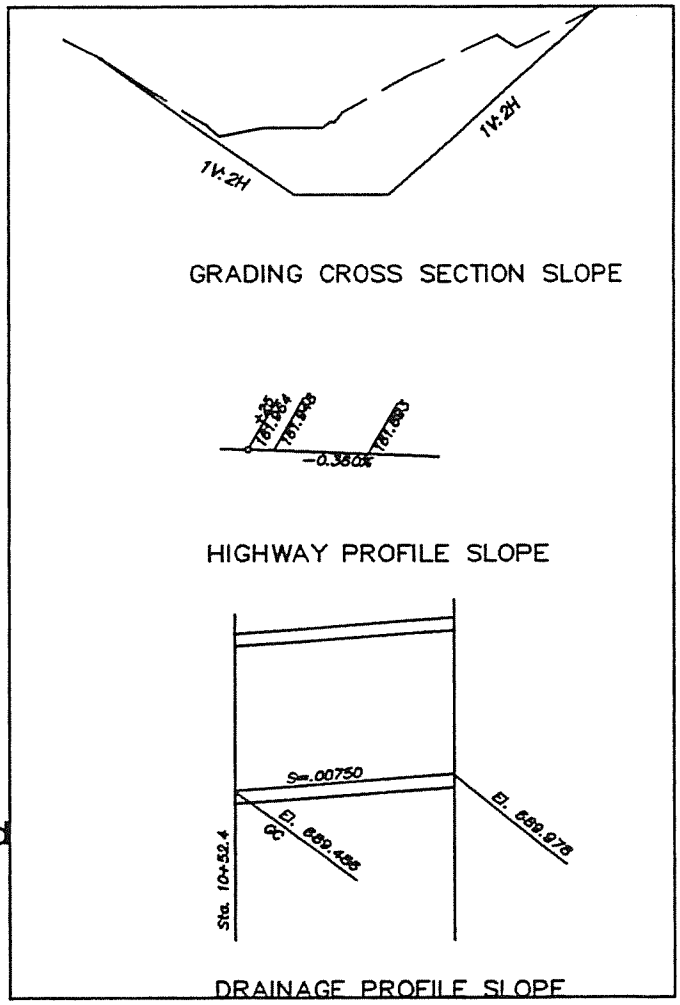

Figure A11-1

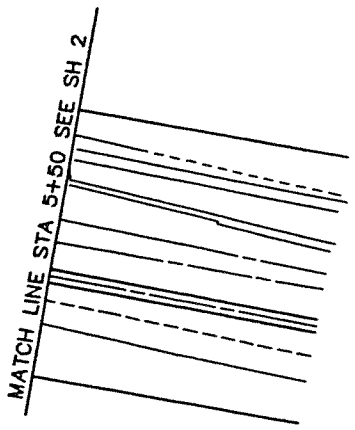
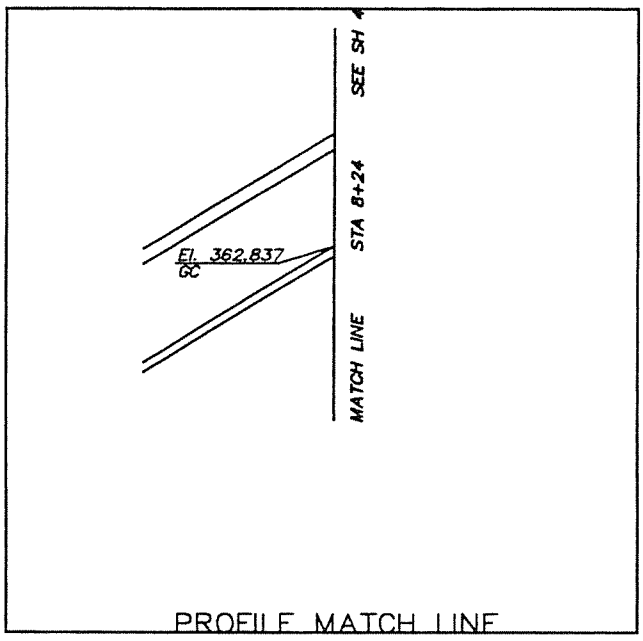
A-12 MATCH LINES



PLAN MATCH LINE

Figure A12-1



PROFILE MATCH LINE

Figure A12-2

Show match lines (except on sewer plans) when the plan must be continued on another sheet. Show station of match line and corresponding sheet reference at each match line. Letter match line text in uppercase with a mechanical lettering guide and place text parallel to the match line. Example match lines are shown in **Figure A12-1** and **Figure A12-2**.

A-13 BENCH MARKS

The first line of the bench mark must include the Name or number, Elevation, Datum, Book and Page. Subsequent lines shall show the general location and specific point as worded verbatim from the survey bench mark book. A bench mark should be specified on every plan sheet near the lower right hand corner.

Example: BM H-32, Elev 204.739 (MALIBU '80), PWFB 852, Pg 21
First Avenue and Arcadia Street, NE Corner
L & T 1.5 m east of east ECR

A-14 NORTH ARROW

Locate the north arrow near the title block on each plan sheet drawing or near the right side of a section or detail. If a graphic scale is used, it should be placed below

the north arrow. The full size north arrow is 65 mm (2.5") long. For details or sections, use a scaled down version of the north arrow. Draft north arrow as shown in **Figure A14-1**.

Figure A14-1

A-15 SYMBOLS

Use the following symbols when applicable:

ⓐ 6mm (1/4") diameter circle with enclosed lower case letter - curve data symbol

Ⓐ 6mm (1/4") diameter circle with enclosed upper case letter(s) - type of R/W symbol

Ⓒ 6mm (1/4") diameter circle with enclosed number - construction item symbol

[2] 10mmx10mm (.4"x.4") box with enclosed number - engineer's estimate item symbol

A-16 CURVE DATA

Show curve data in tabular form with lower case letters in circles identifying each respective curve. If space exists, show BC and EC stationing on the curve radial lines. Always place the BC and EC stations with the curve data. Show back of walk radius only when walk is to be constructed. Example curve data tables are shown in **Figure A16-1**.

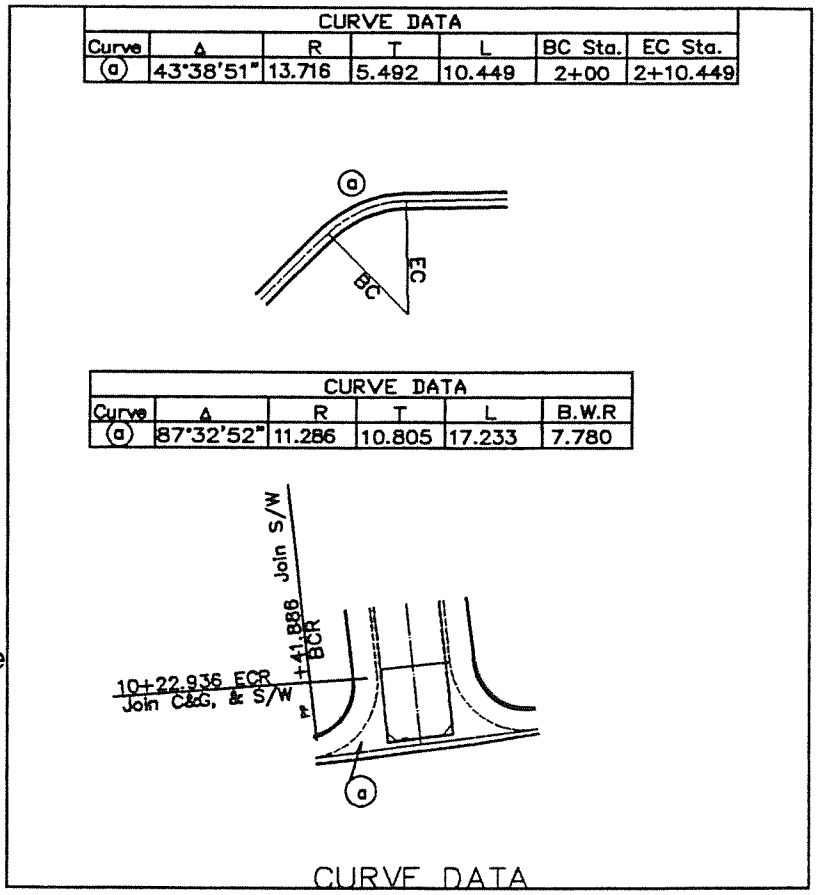


Figure A16-1

A-17 NOTES

General notes should be shown on the first or second sheet of the project. Structural notes should be shown on the structural sheet. Notes particular to a sheet should be shown near the lower right hand corner of the sheet, either above or to the left of the title block.

Instructions to the contractor shall be in the present tense unless the work is to

be done by another party or agency. Place a title above notes.

A-18 TITLE AND SIGNATURE BLOCK

All plans shall have the appropriate Department title and signature block. When a city signature block is required, check with the Project Engineer for the correct format. Example title and signature blocks are shown in **Appendix A**, **Table A18-1**.

A-19 STATIONING

Stationing will be based on 100 meter (feet) per station. Show tick mark at each station centered on the centerline, 5 mm (1/4") total length. Show station text above each tick mark.

A-20 SURVEY INFORMATION

The following standards are used by Department survey crews in locating miscellaneous topography:

- Offsets to objects are taken at the edge nearest the centerline of the street and at the point where the object enters the ground. Offsets are given in the nearest tenth of a meter (foot).
- Tree diameter is indicated as a fraction such as 0.38 m/0.61 m (15"/24"). The 0.38 m (15") indicates the waist-high diameter of the tree in meters, and the 0.61 m (24") indicates the diameter of the tree at the ground in meters. When the size of the tree is shown on the plan, use the waist high diameter.
- The centerline station and offset are given where one station is sufficient to locate an object. In general, the nearest tenth meter (feet) is given.

A-21 TOPOGRAPHY

Draft all existing topography on the reverse side of the sheet, except when drafting with CADD. Show all topography affecting the area of construction. Label existing topography as shown on the sample plans. Place tick marks at the beginning and end of each curb return. Use appropriate symbols to display the topography as shown on **Figure A21-1**. Draft line work

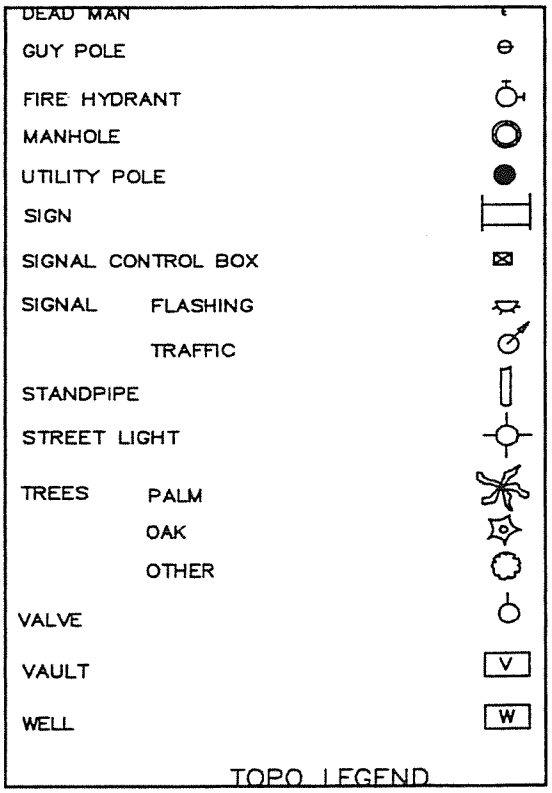

Figure A21-1

with thickness and fonting as shown in **Appendix A, Table A6-1**.

- Rectangular Coordinates

  Show rectangular coordinate points (+) when topography maps are used in undeveloped areas for plans. Label a minimum of two points with a northing and easting. Draft rectangular coordinate points at a size of 10 mm (1/2") by 10 mm (1/2").

- Contour Lines

  When existing contour lines are to be shown, draft them on the reverse side of the sheet, except when drafting with CADD. Draft appropriate index and intermediate contours as shown in **Figure A21-2**

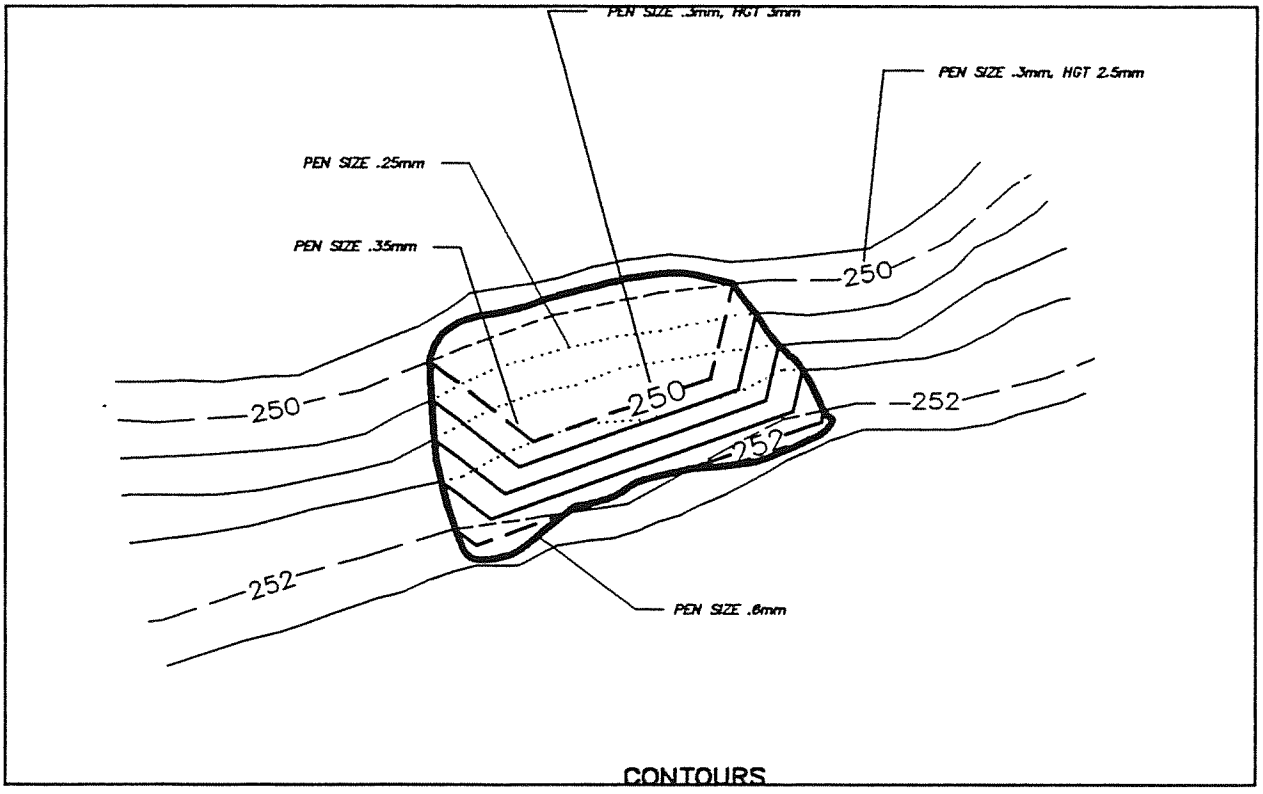

Figure A21-2

- Lot and Tract

  When lot numbers, tract numbers, and map book numbers are to be shown, mechanically draft tract numbers and map book numbers while lot numbers may optionally be drafted freehand.

- Utilities

Draft existing utility lines on the reverse side of the sheet, except when drafting with CADD. Draft the utilities in plan, profile and sectional views as shown in **Figure A21-3**.

When shown in profile, show only the invert of a parallel sanitary sewer line and any utility line that falls in the construction trench, except when it is 0.300 m (12") or larger, then show both invert and soffit. When showing crossing utilities on the profile or typical section, draft at full size.

Label utility line with size, type of utility and location of utility as referenced to the right of way line or the street center line. Labels should be in mixed text case using proper rules of grammar. If the same type of utility line is represented by two or more companies, the company name should be added in parentheses after the description. All utility company names should be listed on the title sheet.

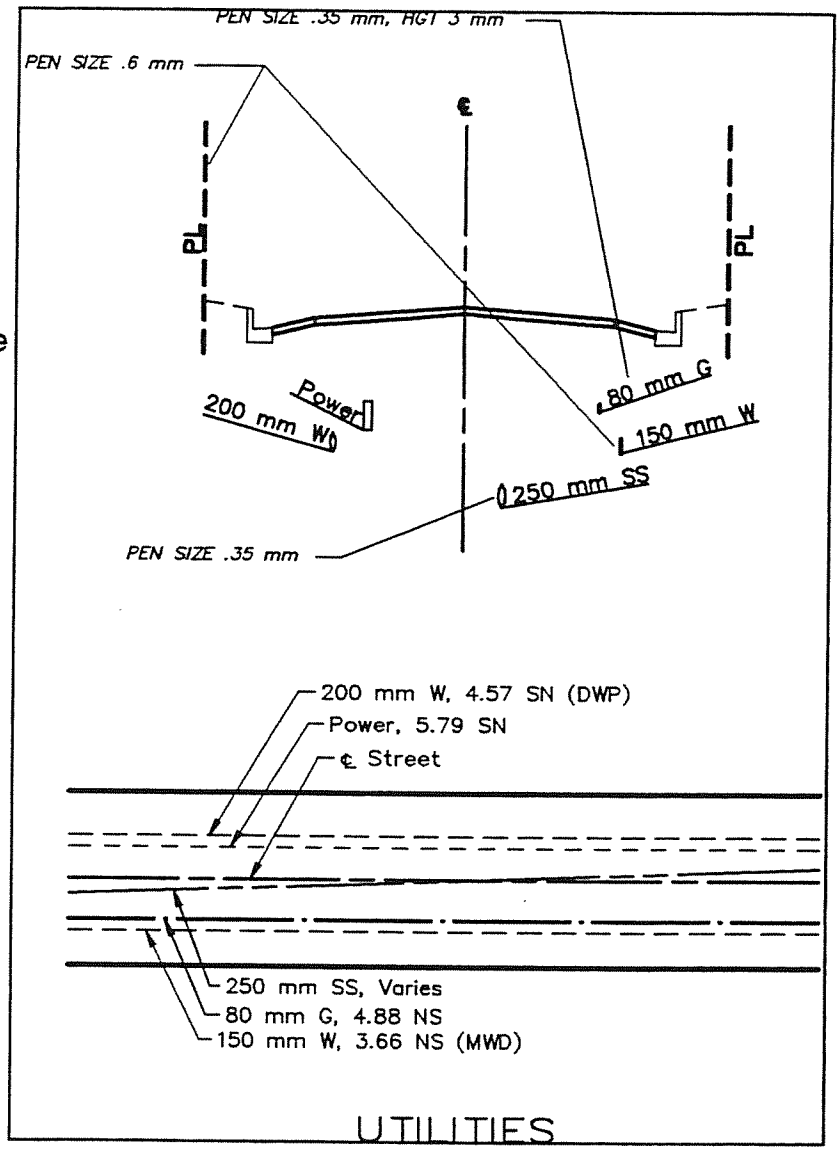

Figure A21-3

A-22 STREETS

Label all streets shown on plan in uppercase letters. Letter the street names with a mechanical lettering method. Indicate state highways with their official number such as "STATE HIGHWAY 1". Place the street name on the road centerline or within the

road right of way when space is restricted. Dimension all R/W and street widths. Draft line work with thickness and fonting as shown in **Appendix A, Table A6-1**.

A-23 TITLE SHEETS

See individual sections for layout requirements and material to be contained on the title sheet. Sample title sheets for various types of projects are also shown in their respective sections.

A-24 PLAN/PROFILE

When beginning a plan/profile sheet, line up the left station of the plan, as near as possible, with the matching left station of the profile. Provide enough room at each end for reference elevations on the profile and match line information on the plan. Draft the plan and the profile to the same horizontal scale. Each sheet should represent a complete and clear portion of the project. Do not place a match line or terminate a sheet within an intersection, railroad crossing or drainage structure.

Line up the stations with the major vertical grid lines on the profile. Label each station directly beneath the profile grid. Label a minimum of two reference elevations on each side of each profile shown.

The plan and profile should be shown in such a manner as to avoid breaks. When a profile needs to be broken, stagger the break at least one major grid and label the break as"identical" from invert to invert or grade line to grade line. Label a minimum of two reference elevations on each side of the profile break. When a plan needs to be broken, label the break as "identical" from ℄ of construction to ℄ of construction.

The existing ground and street surface should be shown as a long dashed line from 30 mm (1.25") to 40 mm (1.5"). The finished grade should be shown as a solid line. For manual drafting, use a straight edge to show the existing street surface and all finished grade and use freehand to show existing ground surface.

Draft line work with thickness and fonting as shown in **Appendix A, Table A6-1**. An example of a plan and a profile are shown in **Appendix A**.

A-25 DETAILS AND SECTIONS

Details and sections should be uniquely labelled and distributed throughout the sheets. Because the two are independent of each other, a detail can have the same name as a section. When sections and details are not on the same sheet to which they pertain, they should be adequately cross referenced by sheet number. Examples are shown in **Figure A25-1.**

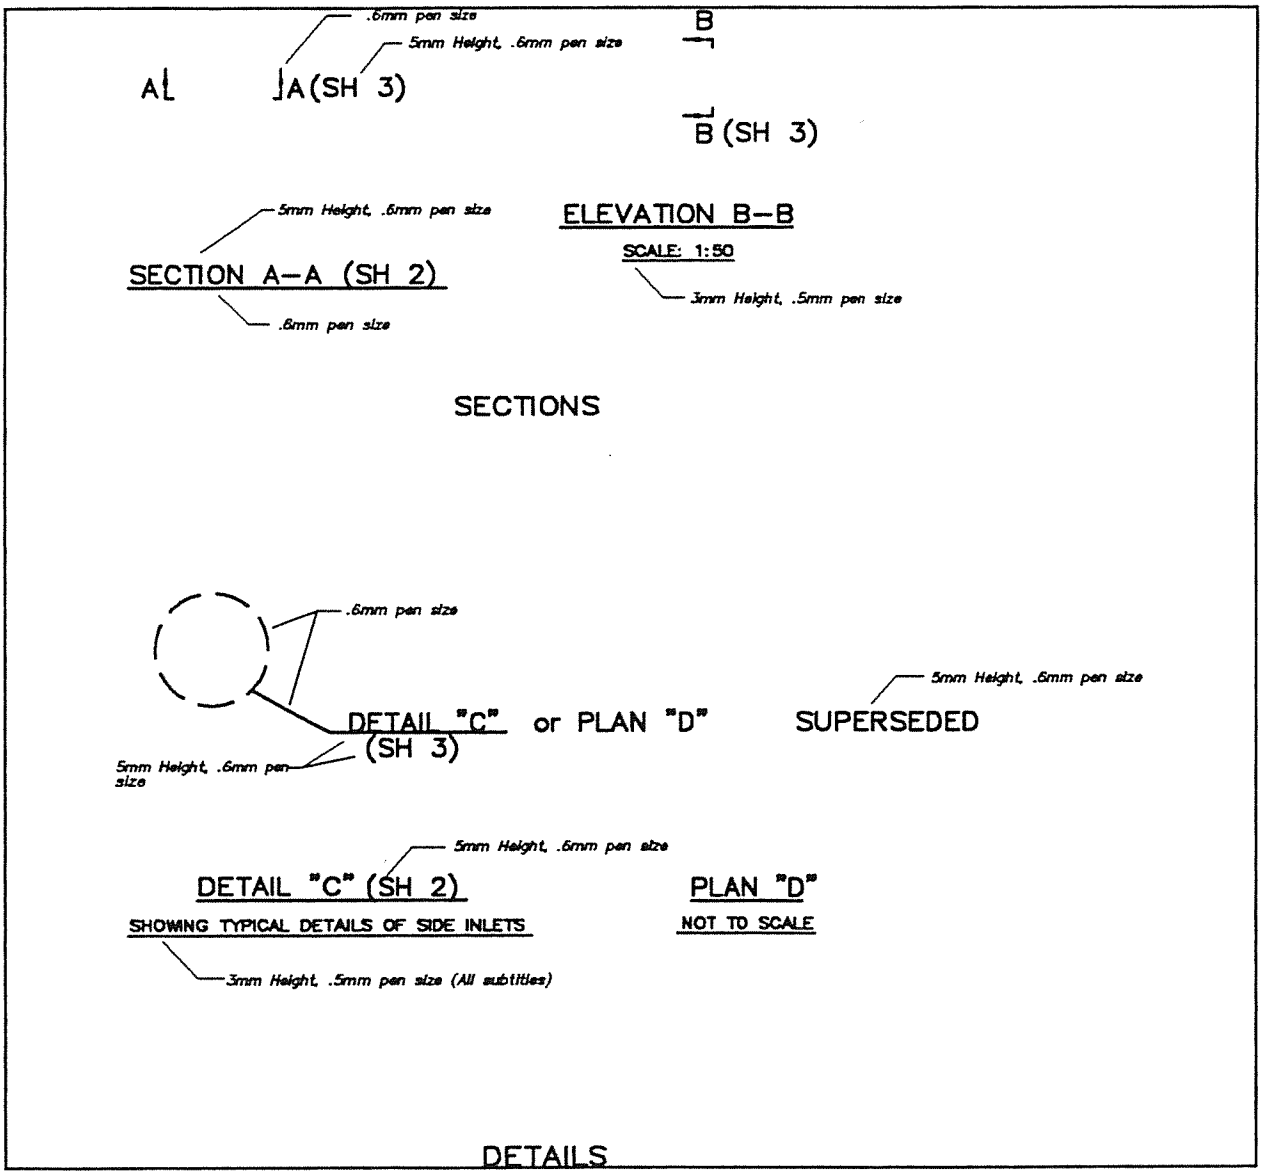

Figure A25-1

A-26 PLANS PREPARED FOR OTHER AGENCIES AND/OR CITIES

Other agencies may require a different plan layout and format depending on the requirements of that agency. The Project Engineer shall determine if the Department's format is acceptable to the other agency prior to preparing plans. If the Department's format is unacceptable, use that agency's format.

SECTION B
DRAINAGE FACILITIES

B-1 INTRODUCTION

The purpose of drainage construction drawings is to show the builder where and how to build drainage facilities.

B-2 GENERAL

Drafting drainage facilities shall conform to the instructions and standards established in Section A of this manual. Section B includes additional instructions specifically for drainage facilities. Sample drainage plans are shown in **Appendix B**.

Upstream is always shown to the right. Orient the plan so that the plan progresses from left to right, upstream, regardless of the orientation of the north arrow.

The centerline of the proposed project shall be called the construction centerline. Stationing along the construction centerline will increase when going upstream. When the construction centerline is parallel to the survey line, indicate the offset. Show construction centerline curve data on the plan. Tie BCs, ECs, and angle points to the survey line. Use distances along survey line from key survey points to perpendicular offset points of construction centerline. Projects in open terrain may use coordinate data to layout construction centerline.

B-3 TOPOGRAPHY

Show all topography and utilities within drainage right of way and within limits of the project. Show all pertinent topography and utilites outside of right of way.

B-4 MAIN LINE

Draft the main line on the plan. Draft main line structures on the plan. Group structural data for these structures in tables as needed.

Draft the main line on the profile. Show thickness to scale of the conduit or channel. Station all structures and grade changes in main line.

B-4 LATERAL

Generally, a separate plan and profile sheet is used to show laterals. On a lateral drawing, show the main line as a heavy dashed line and the lateral as a heavy solid line. Conversely, on a main line drawing, show the main line as a heavy solid line and

the lateral as a heavy dashed line. Clearly reference the lateral drawing on the main line drawing. When more than one lateral is being shown on a sheet, the laterals should be titled on the plan and on the profile.

All drafting standards applying to the main line plan and profile also apply to the lateral plan and profile.

B-5 CATCH BASIN

Draft the catch basin on the plan. Do not show catch basin manholes except for a curb opening catch basin with a manhole in the street.

Locate catch basin on the plan by showing dimension from the nearest curb return to the catch basin location tie. If a curb return is not present, locate the catch basin by providing the construction centerline station of the catch basin location tie.

Call out the catch basin data in a bracket along with the connector pipe data. See appropriate Standard Plans for required catch basin data and location tie.

B-6 LOCAL DEPRESSION

Draft the local depression on the plan.

Call out the local depression data with the catch basin and connector pipe data when not provided for in the project General Notes. See appropriate Standard Plans for required local depression data.

B-7 CONNECTOR PIPE

Draft the connector pipe on the plan.

Call out the connector pipe data with the catch basin data.

B-8 JUNCTION STRUCTURE FOR A CATCH BASIN CONNECTOR PIPE

Do not draft a graphical representation of the junction structure for a catch basin connector pipe on the plan.

Call out the junction structure data for Standard Plans 333 and 331 either at the inlet location on the profile or grouped in a chart on the plan. Call out the junction structure data for standard plans 334 and 332 in the project General Notes. See appropriate Standard Plans for required junction structure data.

B-9 SIDE INLETS

Side inlets to be constructed should be shown solid in profile. The inlet data should include the station, pipe size and the side of the conduit (N, S, E, W) on which it is located. Elevations should not be shown unless requested by the Project Engineer. See appropriate Standard Plans for required inlet data.

B-10 CONDUIT DATA

The data for pipe, box, and open channel should be placed below the conduit profile. Letter the data in mixed case.

- Pipe data should include length, size and D-load. Show additional data as required.
- Box data should include size, type of structure, and section information.
- Open channel data should include size, type of structure and section information.

B-11 QUANTITY OF FLOW

Show the Q above the top border of the profile along the reach for which the Q is applicable. Indicate design frequency when a frequency other than the standard is used.

B-12 CROSS SECTIONS

When cross sections are required, such as for open channel projects, draft them on a separate cross section sheet(s). They are taken looking upstream and should be placed in sequence to read as if moving upstream. The first cross section is placed in the lower-left-hand corner of the cross section sheet. The next cross section is placed above it and the column is continued to the top of the sheet. The next column is started to the right of the first and at the bottom of the sheet with the cycle being repeated as many times as necessary. Plot cross sections above each other so that the construction centerline maintains a straight vertical line for the column.

- Construction Centerline

  Label the construction centerline with the centerline symbol (℄) and the word construction above the top and bottom cross section of each column.

- Right of Way (R/W)

  Right of way lines should appear on the cross sections where applicable. Place the text parallel to and outside of the R/W line.

- Station and Elevations

  Letter station text in upper case. Place the text centered below the structure. Place grid elevations on the right side of each cross section and centered on the main horizontal grid lines.

- Dimensions and Description

  Show structure dimensions on the cross section. If the wall height and width of the structure is the same for several cross sections, show the dimensions only on the lowest stationed cross section.

  Show existing and proposed call outs on the cross section. If the call outs are generally typical for the sheet, the call out need only be shown once per sheet.

- Earthwork

  On each cross section sheet, identify areas of compacted fill at least once.

B-13 TYPICAL CROSS SECTION

A typical cross section is normally shown on a plan/profile sheet when that reach of the project is not covered by the cross section sheets or if there are no cross section sheets. All typical cross sections are taken looking upstream.

Place the typical cross section on the right side of the profile. Title the section CROSS SECTION. If a station is also used as an identifier, it should appear as a subtitle, centered below the title. Show the scale below the title. Pavement thickness shall not be shown on the typical cross sections.

- Elevations

  Place grid elevations per Section B-12.

- Utilities

  Show existing utilities larger than 0.15m (6") dashed and at full size. When a utility is 0.15m (6") or less, use a heavy solid line (Leroy pen 2) to represent the

utility. Abbreviations or single letters should be used to identify the different utility lines. Dimension utilities when applicable.

- Right of Way (R/W)

  Place R/W line per Section B-12.

B-14 STANDARD STRUCTURAL DETAILS (STEEL SCHEDULE)

Use standard structural detail sheets showing typical section, table dimensioning, elevations, and reinforcement when applicable. These standard sheets are listed in **Appendix A, Table A3-1**.

B-15 DETAILS AND SECTIONS

An enlarged detail of the channel, storm drain, or debris basin shall be of such scale that "layout" details and controlling dimensions can be shown legibly. Sectional views, public utilities and obstructions shall be indicated on this plan and adequately referenced to the sheets showing the details for construction. The details and sections should be distributed uniformly in consecutive order throughout the plans.

Sectional views shall be drawn to show completed composition of the structure for the reach where the section is taken. The longitudinal sections should be drawn as though the observer were in the center of the channel looking at the bank (upstream to the right).

SECTION C
HIGHWAY DRAWINGS

C-1 INTRODUCTION

Highway drawings contain information from which contractors prepare bids, surveyors stake construction, contractors build projects and engineer's inspect the contractors work. These plans become permanent records for future reference.

C-2 GENERAL

Drafting highway facilities shall conform to the instructions and standards established in Section A of this manual. Section C includes additional instructions specifically for highway facilities. Sample highway plans are shown in **Appendix C**.

C-3 SHEET LAYOUT

Project limits shall read from north to south or west to east.

Sheets shall be numbered so sheets read from the right on the preceding page to the left on the next page.

The north arrow shall point up or to the right or left. Right or left north arrow orientation is determined by roadway stationing (should increase from left to right), existing plans (maintain existing plan orientation) and adjacent projects (north arrow orientation between adjacent projects should be maintained).

Plan sheets should be numbered in the following sequence: title, typical cross section, roadway plan and profile, intersection details, drainage plan and profile, drainage details, and structural details.

Roadway plans shall be drawn at a 1:500 (1" = 40') scale; however, a 1:200 (1" = 20') scale should be considered when additional drawing space is required for clarity.

Do not show more than 300m (1000ft) or 150m (500ft) of roadway, respectively, on a 500m (40ft)-scale or 200m (20ft)-scale plan and profile sheet.

Sheet layout shall provide adequate drawing space at the beginning and end of the project for pavement transitions. Do not terminate a sheet within an intersection or railroad crossing.

C-4 TOPOGRAPHY

Show all topography within road right of way and within the limits of the project. Show all pertinent topography outside of right of way.

Indicate the type of existing pavement on plan. Existing asphalt covered concrete pavement should be labeled "EX AC ON CONC PVMT" even if it is to be removed. Show the outline of existing curb ramps and driveways as dashed lines in plan view.

C-5 REFERENCE DATA

When an existing curb return is to remain, indicate curb radii on plan.

Show the direction of drainage flow with arrows and the rate of grade to 0.1% at all curb and gutter joins.

Show existing centerline curve data on plan.

C-6 PLAN

Indicate even roadway stations along the centerline with a perpendicular tick mark.

Indicate stations of intersections and changes in alignment with a 2mm (0.075") diameter circle on the centerline.

At intersections, show the station of the street being designed above the leader and the cross street below the leader.

C-7 EXISTING PROFILES

For reconstruction projects, plot centerline, and right and left right of way line profiles.

If the existing curb is to remain, plot the centerline and the edge of gutter profiles.

Indicate paved surfaces with a solid line and unpaved surfaces with a dashed line.

Show existing driveway profiles along the right of way line with a heavier line.

When the pavement at centerline is to be saved, indicate the existing centerline elevations every half station.

C-8 PROPOSED PROFILES

Show proposed profiles as solid lines.

Use 2mm (0.075") diameter circles to indicate grade breaks.

Indicate elevations at every half station, BC, EC, PRC, BCR, ECR, angle point and grade break.

At curb and gutter joins, show existing top of curb, edge of gutter and flow line elevations.

Show the extended top of curb profile, not actual profile, over driveways, curb ramps, etc.

Show street grades for tangents longer than 15 meters (50 feet).

C-9 DETAIL SHEETS

Detail sheets show additional construction information and are usually drawn at larger scales.

C-10 RECOMMENDED LINE WEIGHTS

See **Appendix A, Table A5-2** for text height and line weight.

SECTION D
BRIDGE STRUCTURES

D-1 INTRODUCTION

The Department constructs new and refurbishes existing bridges. The bridge construction drawings are used to show the builder where and how to construct the structures.

D-2 GENERAL

This space is reserved for future information.

SECTION E
MECHANICAL

E-1 INTRODUCTION

The mechanical section of Design Division is involved in designing, modifying, and engineering the replacement of equipment for dams, pumping stations, water conservation facilities, and various building programs. The drafting required for this type of work is almost always mechanical drawing layouts and details.

E-2 GENERAL

This space is reserved for future information.

SECTION F
RIGHT OF WAY & RIGHT OF WAY IDENTIFICATION MAPS

F-1 INTRODUCTION

The term right of way (R/W), when used through out this manual, refers to all forms of land rights allowing for the construction and/or maintenance of DPW facilities.

Drawings which indicate areas needed to be acquired with R/W codes and dimensions are known as R/W identification maps. They will be used by others to prepare an acquisition map from which the legal description will be written and the actual R/W acquisition made.

F-2 GENERAL

Drafting R/W shall conform to the instructions and standards established in Section A of this manual. Section F includes additional instructions specifically for R/W and R/W identification maps.

All construction drawings must show R/W. Use preliminary study maps, when available from Mapping & Property Management Division, as the basis for R/W. If they are not available, R/W may be drawn based upon Los Angeles County Assessor Office maps.

There are two methods of presenting R/W identification maps. Method A is to present the R/W identification information on the construction plans. Method B is to draft the R/W information on plan sheets, separate from the construction plans. When the required R/W is minimal and easy to define, use method A. Otherwise, use method B.

Both methods require a DPW standard R/W legend on each sheet containing R/W modifications. The R/W legend will contain only the types of R/W to be acquired on that sheet. Use symbols, circled upper case letters with arrows, to identify the types and areas of R/W to be acquired. The most common R/W types are shown in **Table F2-1**.

See "Guidelines for Right of Way Mapping" available in Mapping & Property Management Division for a complete list of R/W types. The revision block shall be filled in and dated only on those sheets with changes made after the drawings have been fully approved.

F-3 R/W ON CONSTRUCTION DRAWINGS

For both methods, existing R/W lines not modified by the proposed changes will be

shown as solid lines with the appropriate line thicknesses. Existing R/W lines modified by the proposed changes will be shown as dashed lines with the appropriate line thicknesses. Proposed R/W lines will be shown as solid lines with the appropriate line thicknesses. Identify the ownership and width of all R/W shown for public agencies, railroads and utilities.

When using Method A, show, dimension and identify all forms of R/W on the construction drawings. When using Method B, show all forms of R/W on the construction drawings, except permits to enter and construct. Dimensions and identifications will be shown on the separate R/W Identification Map. See **Appendix F** for samples of R/W on construction drawings.

F-4 R/W IDENTIFICATION MAPS

In addition to section F-3, drawings used as R/W identification maps must adequately dimension the existing and proposed R/W. Show sufficient information to clearly identify the size and location of the R/W to be acquired. Stationing and/or distance to property lines shall be used as references.

Draft R/W on standard Department plan sheets (sheet number DPW.XXXXX). No title sheet is necessary. Show the horizontal controls and stationing used on the construction drawings. Show the curve data, angle points and stationing of the center line on which the R/W is based. Show street and channel names. Use match lines to divide the project into sections. Show the north arrow on each sheet. Use the same scale as the construction drawings. Do not show topography or proposed improvements. Sample R/W Identification Maps are shown in **Appendix F**.

SECTION G
LOGS OF BORINGS

G-1 INTRODUCTION

Materials Engineering Division is responsible for soil investigations for Department projects. As part of this work, logs of borings drawings are prepared to present subsurface information for the construction of storm drains, debris basins, buildings, bridges and other Department facilities.

G-2 GENERAL

Drafting for logs of borings drawings shall conform to the instructions and standards established in Section A of this manual. This section includes additional instructions specifically for logs of borings drawings. When trenches are used instead of borings, replace the term borings with trenches.

Logs of borings shall be drafted on standard Department plan sheets (form number DPW.XXXXXX). Place the notes and symbol legend on the right side of the sheet near the title block. The standard vertical scale is 1:50 (1"=4'), but another vertical scale may be used depending on the specific situation.

Do not use any freehand lettering on logs of borings sheets. Letter the boring, notes and symbols legend titles using a 0.9 mm (.035 in) line thickness and 5 mm (.200") text height. Letter the chart column titles using a .30 mm (.013 in) line thickness and 2.5 mm (.100") text height. Letter the remaining text, both chart and notes text, using a .35 mm (.017 in) line thickness and 3 mm (.125") text height. Draw chart using a .50 mm (.021 in) line thickness and pattern hatching using a .30 mm (.013 in) line thickness. Sample Logs of Borings sheets are shown in **Appendix G**.

G-3 LOGS OF BORINGS

Space the logs of borings uniformly in numerical order from left to right, starting in the upper left corner. Use appropriate pattern hatching for the soil group representations as shown on the Unified Soil Classification System Soil Legend chart, **Appendix G, Table G3-1**. Use commercially available tapes with correct pattern hatching, when they exist, for the soil group representations when manually drafting the logs of borings sheets. In case of dual symbols, use the hatching for the finer grained soil. Use the correct symbols to indicate "depth to conduit subgrade" and "depth to ground water at time of drilling" on the logs of borings chart, when required. An example of a log of boring with pattern hatching is shown in **Figure G3-2**. An example symbols legend is shown in **Figure G3-3**.

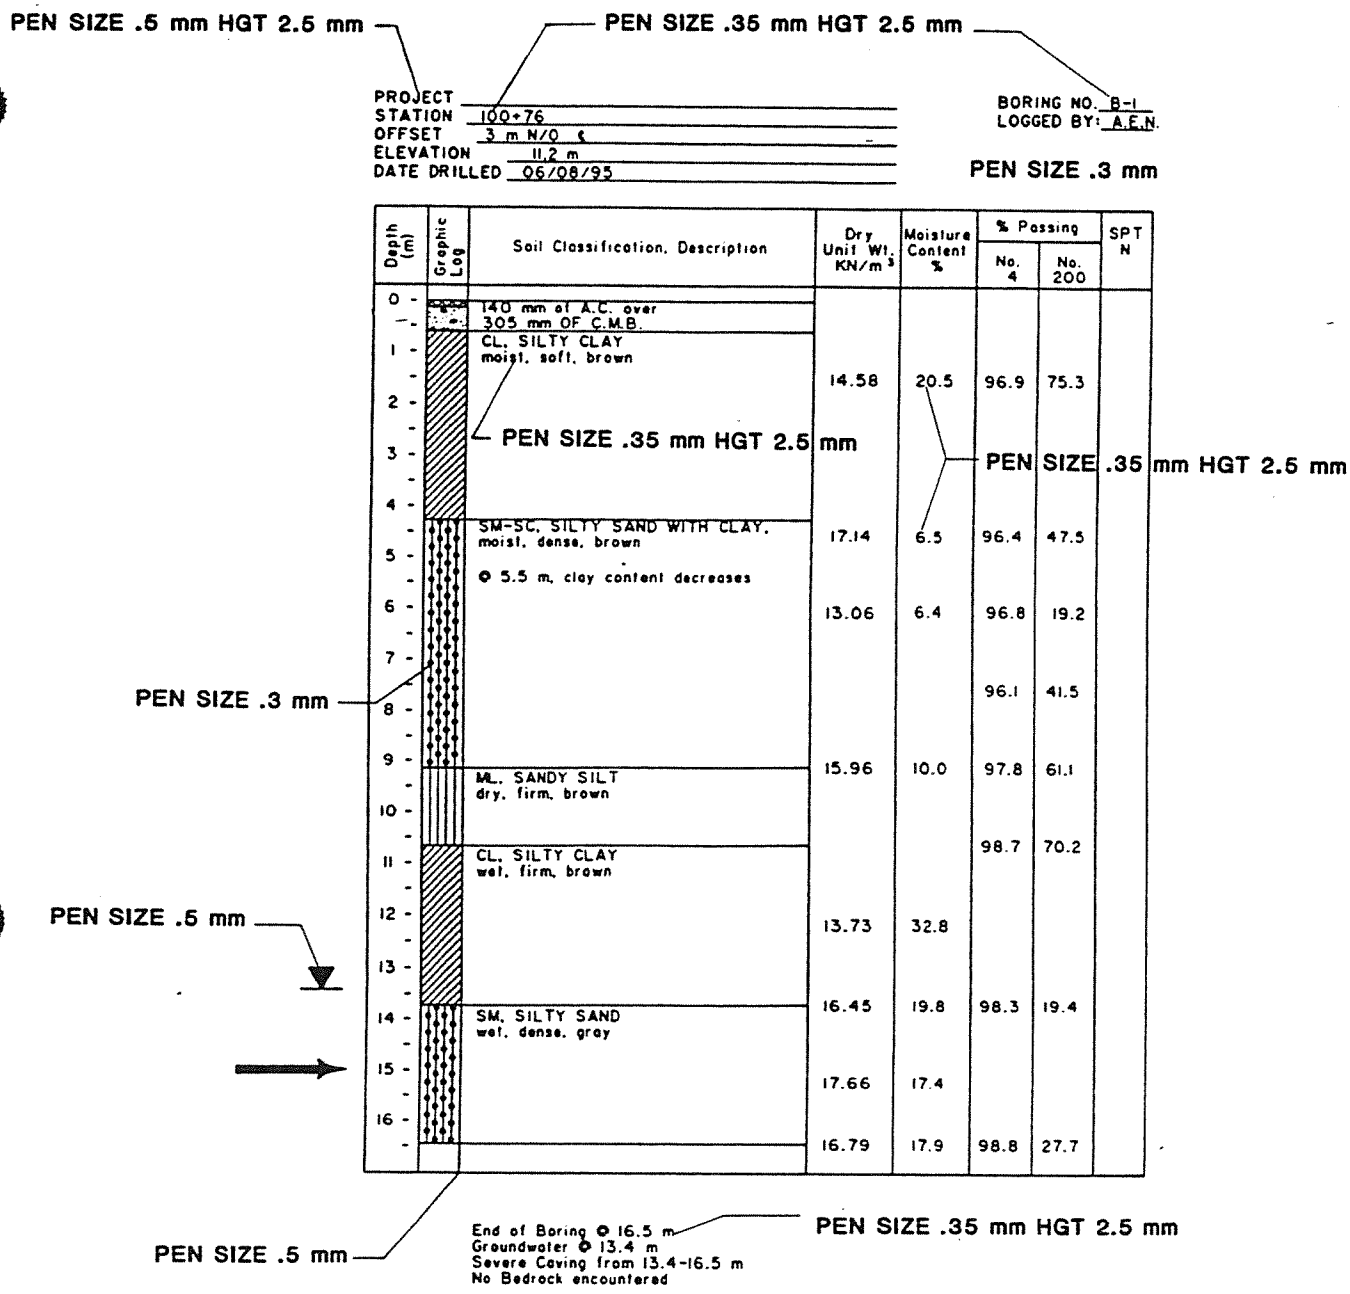

Figure G3-2

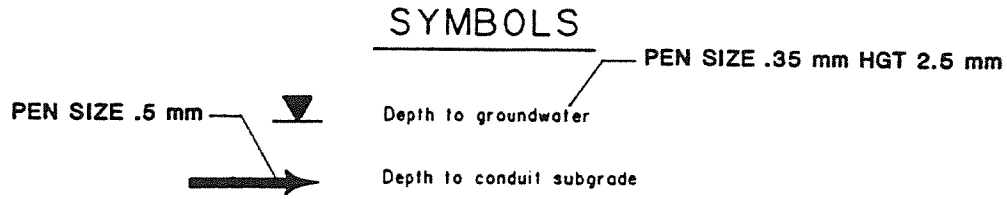

Figure G3-3

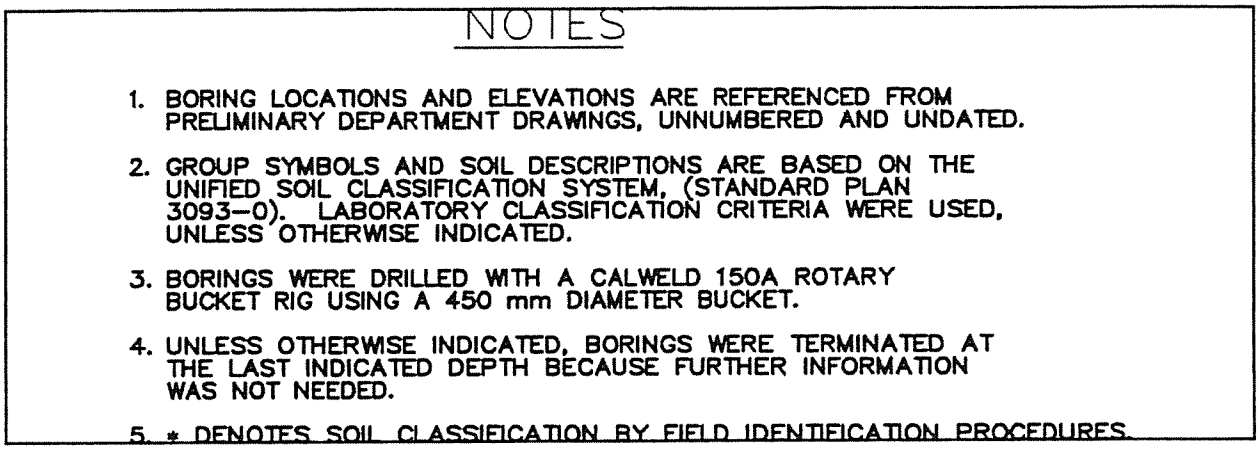
G-4 NOTES

Include soil classification, type of exploration equipment used and references to project drawings in the logs of borings notes. Example notes are shown in **Figure G4-1**.



NOTES

1. BORING LOCATIONS AND ELEVATIONS ARE REFERENCED FROM PRELIMINARY DEPARTMENT DRAWINGS, UNNUMBERED AND UNDATED.
2. GROUP SYMBOLS AND SOIL DESCRIPTIONS ARE BASED ON THE UNIFIED SOIL CLASSIFICATION SYSTEM, (STANDARD PLAN 3093–0). LABORATORY CLASSIFICATION CRITERIA WERE USED, UNLESS OTHERWISE INDICATED.
3. BORINGS WERE DRILLED WITH A CALWELD 150A ROTARY BUCKET RIG USING A 450 mm DIAMETER BUCKET.
4. UNLESS OTHERWISE INDICATED, BORINGS WERE TERMINATED AT THE LAST INDICATED DEPTH BECAUSE FURTHER INFORMATION WAS NOT NEEDED.
5. * DENOTES SOIL CLASSIFICATION BY FIELD IDENTIFICATION PROCEDURES.

Figure G4-1

G-5 TITLE AND SIGNATURE BLOCKS

LOGS OF BORINGS will be the drawing title for a logs of borings drawing with two or more borings. Projects with only one boring will use the title LOG OF BORING. Logs of borings drawings are usually to be included in a set of project drawings and should be numbered as part of the set. The drawing number and sheet number should be obtained from the project engineer. Fill in title blocks per Section A. When a single log of boring is placed on a different type of sheet, place an Engineers seal and signature block below the boring chart.

The project soil engineer signs the approved logs of borings drawing.

SECTION H
SANITARY SEWER

H-1 INTRODUCTION

County Improvement, Accumulative Capital Outlay Project, Cash Contract, Private Contract, and Sewer Reconstruction plans show the builder where and how to build sewer facilities. The different names denote the source of funding for these projects.

H-2 GENERAL

This space is reserved for future information.

SECTION I
CHANGE OF PLAN AND AS BUILT DRAWINGS

I-1 INTRODUCTION

A "Change of Plan" is a modification of the final project design that occurs after the project contract has been awarded but prior to or during construction.

An "As Built Drawing" is a set of original contract drawings that have been revised to reflect how the job was actually constructed.

I-2 GENERAL

The drafting of the "Change of Plan" shall be made by Design Division during the "As Built" change. The "Change of Plan" should be noted in the "Revision Block" of the affected sheet. A triangle, containing a number of order should be used as the symbol.

If the changes are so extensive, a copy is made of the original drawing. The copy maintains the old sheet number. The original takes the next consecutive sheet number and the changes are made on the original sheet. On the title sheet, under the Index to Project Drawings, the new sheet number shall be added.

I-3 PROCEDURE

Revisions are transferred from Construction Division's "As Built" prints to the original contract drawings. Check the project for proposals. If a proposal was awarded, all other proposals should be crossed out on the originals. Erasing is not permitted; therefore, all changes shall be lined out.

Each revision shall be marked with the "As Built" symbol, a blackened square, and shall be so noted in the "Revision Block". In the revision block enter the symbol, the date the sheet was completed, and the words "Field modifications".

On all sheets, the words "As Built Drawings" shall be placed, using 5 mm (.175 in) text height with .6 mm (.026 in) line thickness, in the lower right hand corner below the title block.

Check all projects for joint financing. If the project has been jointly financed, the limits of financing should be indicated on the first sheet of the originals. An example of an "As Built" drawing sheet is shown in **Appendix I.**

OXFORD RETENTION BASIN AND PUMP STATION

TITLE SHEET

JOB X5780107	DWG 507-D1.1	SHEET 1 OF 11

PEN SIZE 0.6 mm, HGT 5 mm

GENERAL NOTES

1. NUMBERS IN CIRCLES INDICATE ITEMS UNDER WHICH PAYMENT WILL BE MADE.
2. NUMBERS AND LETTERS IN BRACKETS, SUCH AS [3] OR [A-3], IDENTIFY STRUCTURES FOR CONTRACT ADMINISTRATION PURPOSES.
3. ELEVATIONS SHOWN ARE IN METERS ABOVE THE U.S.G.S. MEAN SEA LEVEL DATUM, BASED ON L.A. CITY 1980 ADJUSTMENT.
4. STATIONS SHOWN ON THE DRAWINGS ARE ALONG CENTER LINE OF CONDUIT OR ON A LINE NORMAL TO CENTER LINE OF CONDUIT.
5. STATIONS AND INVERT ELEVATIONS OF PIPE INLETS SHOWN ON THE PROFILES ARE AT THE INSIDE FACE OF THE CONDUIT, UNLESS OTHERWISE SHOWN.
6. ALL PIPE IN OPEN TRENCH SHALL BE BEDDED ACCORDING TO STANDARD PLAN NO. 3080-0, CASE 3, EXCEPT BELL AND SPIGOT PIPE WHICH SHALL BE CASE 2 BEDDING, UNLESS OTHERWISE SHOWN. "W" VALUES SHALL BE AS SPECIFIED ON STANDARD PLAN NO. 3080-1 FOR CASE 3 BEDDING, NOTES 3(a), 3(b) AND 3(c). IF THE "W" VALUE AT THE TOP OF THE PIPE IS EXCEEDED, THE BEDDING SHALL BE MODIFIED, AND/OR PIPE OF ADDITIONAL STRENGTH SHALL BE PROVIDED. THE PROPOSED MODIFICATION SHALL BE APPROVED BY THE DEPARTMENT.
7. CONCRETE BACKFILL SHALL BE PROVIDED AROUND PIPE 525 mm IN DIAMETER OR LESS WHERE THE COVER IS EQUAL TO OR LESS THAN 0.61, AROUND PIPE GREATER THAN 525 mm IN DIAMETER BUT LESS THAN 1000 mm WHERE THE COVER IS LESS THAN 0.381, AND FOR PIPE 1000 mm OR GREATER WHERE THE COVER IS LESS THAN 0.305. THE CONCRETE BACKFILL SHALL BE AS SPECIFIED ON STANDARD PLAN NO. 3080-0, NOTE 3.
8. FOR LOCAL DEPRESSIONS, APWA-AGC STANDARD PLAN NO. 313-0, CASE E SHALL BE USED. H SHALL EQUAL 0.025 FOR ALL CASES, UNLESS OTHERWISE NOTED ON THE PROJECT DRAWINGS.
9. CURB FACE SHALL BE 0.203 AT THE ENDS OF LOCAL DEPRESSIONS WHERE THERE IS NO EXISTING CURB.
10. LOCATIONS SHOWN ON THE PLANS FOR EXISTING SANITARY SEWER HOUSE CONNECTIONS ARE APPROXIMATE ONLY.
11. SANITARY SEWER HOUSE CONNECTION RECONSTRUCTION AND RECONNECTION SHALL BE IN ACCORDANCE WITH CITY OF LOS ANGELES STANDARD PLAN NO. S-111-0, UNLESS OTHERWISE SHOWN.
12. SANITARY SEWERS AND HOUSE CONNECTIONS CROSSING OVER THE STORM DRAIN TRENCH SHALL BE SUPPORTED IN ACCORDANCE WITH APWA-AGC STANDARD PLAN NO. 224-0. THE CASE OF SANITARY SEWER SUPPORTS PER CASES 1, 2, AND 4. THE SEWER SHALL BE ENCASED. THE ENCASEMENT SHALL BE A MINIMUM OF 0.152 WIDER ON EACH SIDE OF THE SEWER (O.D. PLUS 300 mm) AND A MINIMUM OF 0.152 ABOVE THE TOP OF THE SEWER. THE SUPPORT BEAM OR SUPPORT WALL SHALL BE WIDENED TO THE WIDTH OF THE ENCASEMENT AND SHALL BE LENGTHENED TO FULLY SUPPORT THE ENCASEMENT.
13. WHEN INDICATED ON THE DRAWINGS, SANITARY SEWERS AND HOUSE CONNECTIONS SHALL BE PROTECTED IN ACCORDANCE WITH CITY OF LOS ANGELES STANDARD PLAN S-255-1.
14. ALL EXISTING UTILITIES SHOWN ON THE DRAWINGS ARE THE PROPERTY OF THE AGENCIES LISTED ON SHEET 1, UNLESS OTHERWISE NOTED.
15. EXISTING UTILITIES SHALL BE MAINTAINED IN PLACE BY THE CONTRACTOR, UNLESS OTHERWISE NOTED.
16. THE CONTRACTOR SHALL MAKE EXPLORATORY EXCAVATIONS TO DETERMINE THE DEPTH AND LOCATION OF EXISTING UTILITIES WHERE SO INDICATED BY THE SYMBOL "△".
17. UTILITIES DESIGNATED BY THE SYMBOL "✱" WILL BE ABANDONED IN PLACE AND THE OWNER WILL INSTALL A NEW SECTION OF THE AFFECTED UTILITY AT A LOCATION IN CLOSE PROXIMITY TO, BUT WHICH DOES NOT PHYSICALLY INTERFERE WITH, THE PROPOSED STORM DRAIN CONDUIT AND APPURTENANT STRUCTURES.
18. UTILITIES DESIGNATED BY THE SYMBOL "⌀" WILL BE REMOVED BY THE OWNER AND THE OWNER WILL REINSTALL A NEW SECTION OF THE AFFECTED UTILITY AT A LOCATION IN CLOSE PROXIMITY TO, BUT WHICH DOES NOT PHYSICALLY INTERFERE WITH, THE PROPOSED STORM DRAIN CONDUIT AND APPURTENANT STRUCTURES.
19. WHERE THE UTILITIES ARE INDICATED ON THE DRAWINGS TO BE SUPPORTED, SAID SUPPORTS SHALL BE IN ACCORDANCE WITH APWA-AGC STANDARD PLAN NO. 224-0, UNLESS OTHERWISE INDICATED.
20. ALL OPENINGS RESULTING FROM THE CUTTING OR PARTIAL REMOVAL OF EXISTING CULVERTS, PIPES OR SIMILAR STRUCTURES SHALL BE SEALED WITH 0.203 OF BRICK AND MORTAR OR 0.152 OF CONCRETE, UNLESS OTHERWISE SHOWN.
21. ALL RESURFACING, CURBS, GUTTERS, SIDEWALKS, DRIVEWAYS, AND OTHER EXISTING IMPROVEMENTS TO BE RECONSTRUCTED SHALL BE CONSTRUCTED AT THE SAME ELEVATION AND LOCATION AS THE EXISTING IMPROVEMENTS, UNLESS OTHERWISE NOTED.
22. REFER TO SHEET 2 FOR TYPICAL CATCH BASIN CONNECTOR PIPE PROFILE.
23. STREET RESURFACING PLANS ARE SHOWN ON SHEET 1.
24. TEMPORARY SUPPORTS FOR WATER LINES SHALL BE IN ACCORDANCE WITH D.W. & P. STD. PLAN A-3615A, UNLESS OTHERWISE SHOWN.
25. MANHOLE 321 SHALL USE THE APWA-AGC STANDARD PLANS FOR PUBLIC WORKS CONSTRUCTION 630-1 FOR THE "FRAME AND COVER" AND 635-0 FOR THE "STANDARD DROP STEP".
26. STRUCTURAL NOTES WILL BE FOUND ON THE SHEET 6.
27. EXISTING TREES SHALL BE REMOVED ONLY IF SO DESIGNATED. THOSE TREES NOT INTERFERING WITH CONSTRUCTION SHALL BE PROTECTED IN PLACE.
28. RIGHT OF WAY FENCING SHALL BE PLACED 0.152 INSIDE THE RIGHT OF WAY LINE.
29. THE WORK SHOWN ON THESE DRAWINGS REQUIRES THE PRIME CONTRACTOR TO HAVE A VALID CLASS A OR C42 LICENSE ISSUED BY THE STATE OF CALIFORNIA.
30. ALL FIELD BOOK REFERENCES ARE TO LOS ANGELES COUNTY DEPARTMENT OF PUBLIC WORKS FIELD BOOKS, UNLESS OTHERWISE NOTED.
31. CURB RAMPS SHALL BE CASE E UNLESS OTHERWISE SPECIFIED. ANY STREET LIGHTING PULL BOXES IN THE RAMP SHALL BE RELOCATED OUTSIDE THE RAMP.
32. "Vin" IS THE DEPTH OF INLET OF CATCH BASINS IN SERIES MEASURED FROM TOP OF CURB TO INVERT OF THE CONNECTOR PIPE.

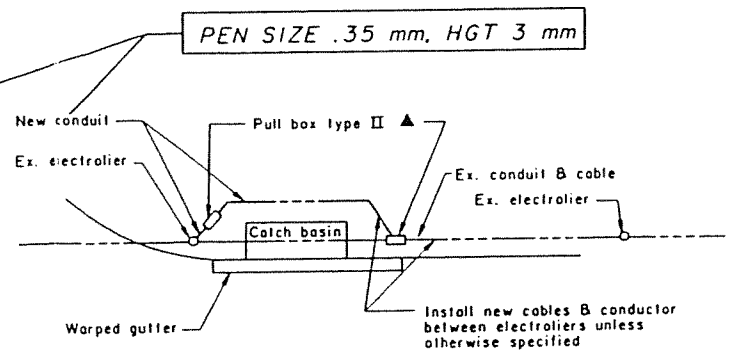
TYPICAL CONNECTOR PIPE PROFILE

NOT TO SCALE

NOTES:

1. THE CHANGE IN GRADE OF THE CONNECTOR PIPE MAY OCCUR EITHER OVER OR UNDER AN EXISTING UTILITY. THE PARTICULAR UTILITY AT WHICH THE CHANGE IN GRADE OCCURS, IS NOTED ON THE PROJECT DRAWINGS. AT LOCATIONS WHERE UTILITY CROSSINGS ARE MARKED ⚠, THE CONNECTOR PIPE GRADE WILL BREAK OVER THE UTILITY. AT LOCATIONS WHERE UTILITY CROSSINGS ARE MARKED ⚠, THE CONNECTOR PIPE GRADE WILL BREAK UNDER THE UTILITY.
2. ON THOSE CONNECTOR PIPES WHERE CHANGE IN GRADE IS NOT INDICATED, IT IS ASSUMED THAT THE CONNECTOR PIPE CAN BE LAID ON A STRAIGHT GRADE FROM THE CATCH BASIN TO THE STORM DRAIN WITHOUT INTERFERENCE WITH UTILITIES.
3. THE CONTRACTOR SHALL MAKE EXPLORATORY EXCAVATIONS TO DETERMINE THE EXACT LOCATION AND DEPTH OF UTILITIES, EXCEPT SANITARY SEWER, WHICH IS MARKED ⚠ OR ⚠. AFTER THE EXACT LOCATION OF A UTILITY HAS BEEN DETERMINED, THE GRADE AND ALIGNMENT OF THE CONNECTOR PIPE WILL BE STAKED SO AS TO CLEAR THE UTILITY.
4. WHERE CONNECTOR PIPE HAS A GRADE CHANGE EXCEEDING 0.10 m PER m OR DIFFERS IN DIAMETER FROM THAT OF EXISTING PIPE, USE CONCRETE COLLAR AS PER STANDARD DRAWING 380-1.
5. AUTOMATIC FLAPGATE VAULT IS NOT SHOWN. REFER TO SHT. 4 FOR DETAILS.

PEN SIZE .35 mm, HGT 3 mm



TYPICAL MODIFICATION OF STREET LIGHTING CONDUIT

NOT TO SCALE

▲ Pull boxes shall not be installed unless approved by the engineer

PEN SIZE 0.5 mm, HGT 3 mm

STREET LIGHTING NOTES

1. ALL WORK INDICATED & SHOWN ON THIS PLAN IN CONNECTION WITH THE ELECTROLIER LIGHTING INSTALLATION SHALL BE DONE BY THE CONTRACTOR, AND ALL THE MATERIALS SHALL BE FURNISHED TO COMPLETE THE SYSTEM, READY FOR OPERATION, ALL IN ACCORDANCE WITH STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
2. AT LOCATIONS WHERE NEW ELECTROLIER LIGHTING CABLE IS REQUIRED, THE CONTRACTOR SHALL FURNISH & INSTALL IN ELECTROLIER LIGHTING CONDUIT A NO.8 A.W.G. COPPER CONDUCTOR, INSULATED WITH U.L. APPROVED POLYETHYLENE COMPOUND RATED FOR 5000 V OPERATION.
3. ELECTROLIER LIGHTING CABLES SHALL RUN THROUGH PULL BOXES WITHOUT SPLICING, EXCEPT FOR TRANSFORMERS, ALLOWING 1m (3') OF SLACK IN EACH CABLE, IN EACH PULL-BOX.
4. CONTRACTOR SHALL MAINTAIN SERVICE TO ANY EXISTING LAMPS, MAKE ALL NECESSARY TEMPORARY CONNECTIONS, & CONNECT ALL LAMPS AS DIRECTED BY THE STREET LIGHTING ENGINEER. WHERE CONDUIT IS DISTURBED AND FOUND UNSAFE BY THE INSPECTOR OF THE (•), CONTRACTOR SHALL REPLACE CONDUIT AND CABLE.
5. WARNING: CONTRACTOR SHALL OBTAIN DAILY SAFETY CIRCUIT CLEARANCE FROM THE (•) CUTOUT PLUGS MUST BE PLUGGED, AND "MEN AT WORK" SIGNS POSTED AT SERVICE POINTS BEFORE ANY WORK IS DONE, OR ANY CONNECTIONS MADE INVOLVING EXISTING LIGHTING SYSTEMS.
6. ⚠ 250 INDICATES NUMBER AND TOTAL LENGTH OF WIRES TO BE REMOVED. FURNISH AND INSTALL NEW WIRES.
7. ⚠ 25 INDICATES SIZE AND LENGTH OF CONDUIT TO BE REMOVED. FURNISH AND INSTALL NEW CONDUIT.
8. ⚠ INDICATES PROTECT EXISTING STREET LIGHTING FACILITIES.

• USE APPROPRIATE AGENCY.

GENERAL NOTES

1. PRIME CONTRACTOR LICENSE REQUIRED: CLASS A OR C12.
2. ALL STRUCTURES SHALL BE CONSTRUCTED PER APWA STANDARD PLANS, UNLESS OTHERWISE SHOWN. THE TOPOGRAPHY SYMBOLS SHOWN ON PLAN ARE PER STD. 100-1. FOR AC PAVEMENT TYPE SEE LACDPW STD. 1010-0.
3. ALL CURB RAMPS ARE PER LACDPW STD 1200-2.
4. ADJUST THE ELEVATION OF TRAFFIC SIGNAL AND STREET LIGHT PULL BOXES AS NECESSARY AS PART OF WHEELCHAIR RAMP CONSTRUCTION. ADJUSTMENT COST SHALL BE INCLUDED IN THE BID PRICE FOR PCC WALK.
5. FIELD DENSITY AFTER ROLLING OF ALL ASPHALT CONCRETE PLACED ON THIS PROJECT SHALL BE A MINIMUM OF 95 PERCENT RELATIVE COMPACTION, PER SUBSECTION 302-5.6.2 OF THE STANDARD SPECIFICATIONS.
6. THE CONTRACTOR SHALL LOCATE AND ADJUST ALL STORM DRAIN AND SEWER MANHOLES TO NEW STREET SURFACE, AT THE BID PRICE FOR MANHOLE ADJUSTMENT AND/OR RECONSTRUCTION.
7. THE CONTRACTOR SHALL CONTACT MR. JOHN REDNER, (213) 774-7272, COUNTY SANITATION DISTRICTS, FORTY-EIGHT HOURS PRIOR TO STARTING CONSTRUCTION. SEE SPECIFICATIONS FOR ADJUSTING DISTRICTS' MANHOLES TO NEW STREET SURFACE.
8. REMOVE EXISTING AC PATCHES AT CURB & GUTTER AND SIDEWALK WHERE THERE IS CURB & GUTTER AND SIDEWALK REPLACEMENT.
9. THE CONTRACTOR SHALL MODIFY EXISTING SPRINKLER SYSTEMS AS NECESSARY TO ACCOMMODATE NEW CONSTRUCTION. THE COST TO MODIFY SPRINKLER SYSTEMS SHALL BE INCLUDED IN THE BID PRICE FOR PCC WALK.
10. PRIOR TO PLACING AC PAVEMENT, ALL CRACKS WIDER THAN 6 mm SHALL BE SEALED WITH EMULSIFIED ASPHALT AND SAND PER SPECIAL PROVISIONS.
11. AFTER COLD MILLING, AND PRIOR TO PLACING LEVELING COURSE, REPAIR SEVERELY LOCALIZED ALLIGATORED AREAS AND FILL ALL CRACKS WIDER THAN 6 mm WITH EMULSIFIED ASPHALT AND SAND. THE COST TO CRACK SEAL SHALL BE INCLUDED IN THE BID PRICE FOR AC PAVEMENT.
12. DO NOT COLD MILL OVER EXISTING MANHOLES, CATCH BASIN LOCAL DEPRESSIONS, OR SIGNAL LOOP LEADINS.
13. DROPOFFS ON THE PAVEMENT OVER 25 mm IN HEIGHT THAT WILL REMAIN OVERNIGHT SHALL BE RAMPED WITH TEMPORARY AC PAVEMENT.
14. WHERE NEW FULL-WIDTH SIDEWALK IS TO BE BUILT, CONSTRUCT TREE WELLS PER APWA STD. 519-2, TYPE 3, CASE 3 WITH TEMPORARY TREE WELL COVERS PER APWA STD. 524-0, CASE 3.

CONSTRUCTION LEGEND

1. PORTLAND CEMENT CONCRETE CURB AND GUTTER.
2. PORTLAND CEMENT CONCRETE CURB.
3. ASPHALT CONCRETE CURB.
4. PORTLAND CEMENT CONCRETE GUTTER.
5. PORTLAND CEMENT CONCRETE SIDEWALK, 100 mm THICK
6. PORTLAND CEMENT CONCRETE SIDEWALK, 150 mm THICK
7. PORTLAND CEMENT CONCRETE PAVEMENT ON BASE MATERIAL
8. ASPHALT CONCRETE PAVEMENT.
9. ASPHALT CONCRETE PAVEMENT ON BASE MATERIAL
10. ASPHALT CONCRETE PAVEMENT, VARIABLE THICKNESS
11. PAVEMENT FABRIC.
12. SELECT SUBBASE.
13. COLD MILL ASPHALT CONCRETE PAVEMENT.
14. DRIVEWAY, PER STD. 110-0.
15. ALLEY INTERSECTION ON _ CMB.
16. CROSS GUTTER ON _ CMB.
17. BUS PAD, PER LACDPW STD. 131-0.
18. DRAINAGE SYSTEM AS SHOWN ON SHEET INDICATED.
19. HOUSE WALK (100 mm PCC SIDEWALK)
20. CURB RAMP.

CONSTRUCTION SYMBOLS

- (NO) — INDICATES WORK PER CONSTRUCTION LEGEND.
- A3-6 — ABOVE LINE: INDICATES THE TYPE OF STANDARD OR THICKNES OF SURFACE MATERIAL IN METERS
- DETAIL A, SHT.10 — BELOW LINE: REFERENCE TO DETAIL OR THICKNESS OF BASE MATERIAL IN METERS.
- (14) W, ℄ STA. — ABOVE LINE: A=WIDTH OF DRIVEWAY BEHIND R/W B=JOIN DISTANCE FROM R/W. BELOW LINE: THICKNESS AND TYPE OF SURFACE BEHIND R/W. LEFT OF LINE: ℄ STA. OF DRIVEWAY APRON. RIGHT OF LINE: DRIVEWAY WIDTH "W" OF APRON
- (MT) W/L — MEDIAN TAPER PER STD. PLAN 140-1
- (MF) W/L — MEDIAN FLARE PER STD. PLAN 141-0
- (19) ℄ STA. — ABOVE LINE: A=WIDTH WITHIN R/W. BELOW LINE: B=WIDTH BEHIND R/W. C=JOIN DISTANCE FROM R/W. LEFT OF LINE: ℄ STA. OF HOUSE WALK.
- R — TREE TO BE REMOVED.

TREE PLANTING NOTES

1. See special provisions for tree planting.
2. Tree planting per APWA Stds. 520-1 (Case 1) and 518-1.
3. Tre planting location will be subject to the following minimum clearances:
   A) 15.24 from the BCR on the approach to an intersection and 4.57 from the ECR on the exit side.
   B) 6.1 from light standards.
   C) 3 from fire hydrants and driveways.
   D) 1.5 from house walks and utility meters.
4. Exact location to be determined by the field engineer.

NOTES

1. Station and off-set of test borings were determined from Department Drawings for (Project Name), unnumbered, unnamed.
2. Group symbols and soil description are based on the Unified Soil Classification System (Standard Plan No. 3093-01). Laboratory classification criteria were used, unless otherwise indicated.
3. * Denotes soil classified by field identification procedures
4. Boring Nos. B-1 to B-3 were drilled with a 12-inch Rotary Bucket Drill rig.
